1 Product Overview

1.1 Introduction

S5KJN1SQ03 is a highly integrated 50 MP camera chip with a CMOS Image Sensor (CIS), image correction functionality and serial transmission capability using 4-lane MIPI. It is designed for fast and low-power operation to deliver full resolution capture at 10 frames per second (fps) and full field of view (4:3) 12.5 MP video at 30 fps.

S5KJN1SQ03 has 2x2 Tetra-Cell RGB Bayer pattern. Each color channel of 2x2 Tetra-Cell RGB Bayer pattern is composed of four pixels of one color filter and its shape is 2x2 square. S5KJN1SQ03 has two output modes. One is binning output mode in which the adjacent same color pixels are summed. The other is normal output mode without binning, but there are changes in the order of output sequence of the real pixel array. In normal output mode, remosaic algorithm is necessary to reconstruct normal Bayer image.

S5KJN1SQ03 is fabricated by the Samsung CMOS image sensor process, which realizes a high-efficiency and low-power photo sensor. The sensor consists of 8160x6144 effective pixels that meets the 1/2.76-inch optical format.

S5KJN1SQ03 CIS has on-chip 10-bit ADC arrays to digitize the pixel output and on-chip Correlated Double Sampling (CDS) to drastically reduce Fixed Pattern Noise (FPN). It incorporates on-chip camera functions such as dark level compensation, defect correction, exposure setting, and white balance setting.

S5KJN1SQ03 CIS is programmable through a CCI or SPI serial interface and includes on-chip One-Time Programmable (OTP) Non-Volatile Memory (NVM).

S5KJN1SQ03 is suitable for a low-power camera module with a 2.8 V/1.8 V/1.05 V power supply.
